3D073 INTERIOR OF EARTH
Showing inner, outer material and formation of the earth

3D074 RIVER IN ACTION (Water Cycle) Showing the stages of river actions in different phases.

3D075 GEOGRAPHICAL TERMS Features of landscape to reach the formation of particular geographical terms

3D076 ROCKS & VOLCANOES (i) Sedimentary Rocks (ii) Igneous Rocks (iii) Metamorphic Rocks (iv) Volcanoes

3D077 CONVENTIONAL SIGNS Showing about 60 signs in actual relief.

3D078 AIR & WATER POLLUTION Showing the factors that cause Pollution both in the air as well as in the water. Printed in multicolors in actual relief.

3D079 THE VOLCANIC SYSTEM Shows different parameters how volcanoes take place & the hanging feature there after.

3D080 OXYGEN & CARBON CYCLE IN NATURE Showing in detail the oxygen & carbon dioxide in the air, photosynthesis and respiration

3D081 MODEL OF RESTLESS EARTH Showing sea floor spreading of crust, subduction zones, the continents Mid-Ocean Ridge.

3D082 FORMATION OF ROCKS Geological cycle and the process of ever changing contents of earth which Result in formation of Rocks.

3D083 GLACIAL LANDSCAPE Shows the landscape before and after glacial action

3D084 ORIGIN OF THE EARTH Shows various stages through which the earth was formed

3D085 MODEL EARTH QUAKE Shows the origin, motion produced & the effects of earth quakes.

3D088 MODEL OF THE LAKES Shows different kinds of lakes and how lakes become firm ground

3D098 STORY OF THE EARTH Shows the earth's Geological history from the very beginning till today.

3D099 WEATHERING MODEL Shows how climate precipitation and temp. along with mechanical & chemical process.

3D097 THE EARTH'S INTERIOR Showing mineral resources is a volume of the Earth's crust .

3D100 GROUND WATER Shows how the water moves in the pore spaces .

3D089 DESERT FEATURES & EOLIAN SYSTEM Shows why the day temperature in deserts are very high & night temperatures very low.

3D090 CYCLE OF EROSION Shows the cycle of Erosion works, rivers move sediment down streams, widening the valleys & debris is removed from drainage system.

3D091 DEFORMATION OF THE EARTH (FOLDS & FAULTS) Shows the process of the deformation of the earth.

3D092 DRAINAGE PATTERN Shows the topographical, morphological, nature of rocks and the slope pattern which determine the drainage pattern in nature.

3D093 SHORELINE SYSTEM Shows the coastal land form which are made by various marine forces & how the action of waves make different coastal landscapes.

3D094 GLACIAL SYSTEM Shows how the Ice flows under the pull of gravity

3D095 MASS MOVEMENT ON EARTH Shows how mass movement of erosion of land, under all Geological conditions of the earth.

3D096 FEATURES OF THE DRY DESERT Shows how be scouring winds work on the land surface of the deserts.

3D086 FOLDS & FAULTS Ten different figures of folds & faults in multicolors and actual relief.

3D087 STRUCTURE OF EARTH MODEL Showing about the Earth Continents, Rocks & Ocean Floors.

Collecting River System :

Collecting river system consists of a network of tributaries in the headwater region. V-shaped valleys, interlocking spurs, rapids, waterfalls and gorges are features associated with it.

FM01

Transporting River System :

Main trunk stream system of water and sediment movement from collecting system towards dispersing system. Meanders, oxbow lakes and levees are features associated with it.

FM02

Ice Sheet and Icebergs :

An ice sheet is a mass of glacial land ice extending more than 50,000 square kilometers. An ice shelf is the floating extension of the ice sheets. The primary mechanism of mass loss from ice shelves is iceberg calving.

FM03

Convergent Plate Boundaries :

Convergent plate boundaries, also known as destructive plate boundaries are zones where lithospheric plates collide. Magma is generated at subduction zones.

FM04

Divergent Plate Boundaries :

Divergent plate boundaries, also known as constructive plate boundaries are zones where lithospheric plates drift from one another.

FM05

Transform Plate Boundaries :

Transform plate boundaries move horizontally past each other on strike-slip faults. Lithosphere is neither created nor destroyed.

FM06

Structural Basin :

A structural basin is a large-scale structural depression of rock strata formed by tectonic warping of previously flat lying strata. The exposed strata in a basin are progressively younger from outside-in, with the youngest rocks in the center.

FM07

Plateau :

A plateau is an area of highland, usually consisting of relatively flat terrain. The essential criteria for plateaus are low relative relief and some altitude.

FM08

Fold Mountains :

Mountains formed mainly by the effects of uplift and folding on layers within the upper part of the Earth's crust. Fold Mountains are usually formed from sedimentary rocks.

FM09

Normal Fault :

In normal fault, the hanging wall block moves down relative to the footwall block. Normal faults are associated with crustal tension.

FM10

Reverse Fault :

In reverse fault, the hanging wall block moves up relative to the footwall block. Reverse faults are associated with the crustal compressions.

FM11

Anticlines and Synclines :

Anticlines and synclines are folded rock layers formed in sections of the crust that are undergoing compression. Anticlines are arch shaped and synclines are trough shaped.

FM12

Horsts and Grabens :

Horsts and grabens are the regions that lie between normal faults. A horst represents a block pushed upward by the faulting, and a graben is a block that has dropped due to the faulting.

FM13

Groundwater :

Water located beneath the ground surface in soil pore spaces and in the fractures of rock formations. Ground water can be obtained by drilling or digging wells.

FM14

Sand Dunes - Barchans :

A barchan dune is an arc-shaped sand ridge, comprising well-sorted sand. Barchans are the commonest types of dunes occurring in sandy deserts.

FM15

Archipelago :

An archipelago is a chain or cluster of islands. Archipelagos may be found isolated in bodies of water or neighboring a large land mass.

GEOGRAPHICAL TERMS MODELS

FMT01 to FMT20
Size 40 x 35 cm
@ 1800/- each

River Meander & Ox Bow Lake

A meander is a bend in a sinuous watercourse. When a meander gets cut off from the main stream, a U-shaped oxbow lake is formed.

FMT01

Delta

A delta is a land form that is formed at the mouth of a river. Deltas are formed from the deposition of the sediment carried by the river.

FMT02

Valley

An elongated lowland between ranges of mountains, hills, or other uplands, often having a river or stream running along the bottom is a valley.

FMT03

Water Fall

A waterfall is a place where flowing water rapidly drops in elevation as it flows over a steep region or a cliff.

FMT04

Gorge & A Mountain

Gorge is a deep ravine between cliffs often carved from the landscape by a river.

FMT05

An Irrigation Dam

A dam is a barrier that impounds river water. Dams store water for irrigation, to meet energy demands and to meet water needs for towns.

FMT06

A Mountainous Pass

A mountain pass is a natural route through a mountain range or over a ridge. It marks the highest point between two valleys and the lowest point along a ridge.

FMT07

Glacier

A glacier is a large persistent body of ice that forms where the accumulation of snow exceeds its ablation.

FMT08

Island & Lagoon

Island is a piece of land surrounded by water. A lagoon is the enclosed water of an atoll.

FMT09

Lake

A lake is a body of water of considerable size, localized in a basin, that is surrounded by land. Lakes are inland.

FMT10

Peninsula

A projecting area of land completely surrounded by water from three sides.

FMT11

Isthmus

A narrow land connecting two larger land areas with waterforms on either side.

FMT12

FIBER GLASS GEOLOGY & GEOGRAPHY MODELS

Strait

A narrow channel of water connecting two larger, navigable water bodies.

FMT13

Bay

An area of sea water mostly surrounded by land.

FMT14

Cape

A cape is a point or body of land extending into a body of water, usually the sea.

FMT15

Estuary

An arm of the sea that extends inland to meet the mouth of a river.

FMT16

Gulf

A Gulf is a large bay that is an arm of an ocean or sea.

FMT17

Confluence

Confluence is the point where two streams flow together, merging into a single stream.

FMT18

Concave & Convex Slopes

Terrain feature that is rounded like the exterior of a sphere is a convex slope. Terrain feature that is rounded inward like the inside of a bowl is a concave slope.

FMT19

Undulating slopes

Landmasses having a wavelike appearance or form are known as undulating slopes.
